

T11 – Hotel Revenue Dashboard | Dashboard Evidence

Evidence 1 — Dashboard overview, KPI cards, and channel profitability

T11 – Hotel Revenue Dashboard | Dashboard Evidence

Evidence 2 — Capacity/overbooking test, next-season strategy, and executive takeaways

Capacity & overbooking test

Historical demand pressure against the 120-room capacity.

Room capacity	120
Peak gross booking load	22 rooms
Peak confirmed load	19 rooms
90% review trigger	108 rooms
Trigger reached historically	No

Decision rule: 108 rooms is a review trigger, not an automatic overbooking quantity. The dataset does not contain no-show behaviour or oversell costs.

Next-season strategy

Actions derived from the verified channel and capacity analysis.

1 • Build higher-value demand

Increase direct and corporate demand where feasible, while tracking incremental profitability.

2 • Use OTAs selectively

Retain OTA channels for incremental volume and monitor cancellation rate plus realised net revenue.

3 • Review capacity near 90%

Only consider controlled overbooking when daily committed/confirmed demand approaches capacity and additional no-show evidence is available.

Executive takeaways

What a manager should notice first.

Revenue quality

Net revenue is ₹1.70 Cr after stated channel commissions. Channel performance should be assessed using realised value, not booking count alone.

Cancellation exposure

22% of bookings were cancelled. The cancellation rate varies by channel, so it should be monitored alongside channel volume and realised value.

Capacity pressure

Historical peak confirmed load was only 19 of 120 rooms, so the supplied history never activated the proposed 90% capacity review trigger.

Verification note: Headline figures were recomputed from the supplied Bookings sheet. Cancelled bookings contribute zero realised room revenue. Occupancy, ADR and RevPAR use confirmed bookings; cancellation rate uses all bookings. The dashboard uses the actual observed stay window rather than silently assuming the stated booking period is the operating period.
